

REPORT ON THE RECEIPT OF MEDICAL HUMANITARIAN AID DURING MARTIAL LAW IN UKRAINE

As of 1 July 2026

Ministry of Health of Ukraine

Medical supply needs are collected from:

- Healthcare institutions subordinate to the Ministry of Health of Ukraine
- Healthcare institutions of the National Academy of Medical Sciences of Ukraine
- Municipal healthcare facilities (regional needs are verified through Regional Health Departments)
- Institutions coordinated by the Ministry of Defence, Ministry of Internal Affairs, Security Service of Ukraine, Foreign Intelligence Service, State Service for Special Communications and Information Protection, State Protection Department, State Administration of Affairs, and other government agencies (centrally coordinated through the respective institutions)

Medical supply requests:

- are submitted through the MedData information system or by telephone (during power or internet outages);
- may be collected on an emergency basis;
- are verified with Regional Military Administrations;
- are processed through MedData, which is integrated with the Ministry of Social Policy's electronic Humanitarian Aid System.

Key Coordination Functions

Medical needs are addressed through:

- Centralized procurement
- Procurement conducted by military administrations and healthcare facilities
- Humanitarian assistance

Priority requests for humanitarian aid are determined based on an analysis of needs that cannot be rapidly covered through procurement mechanisms or require immediate emergency response.

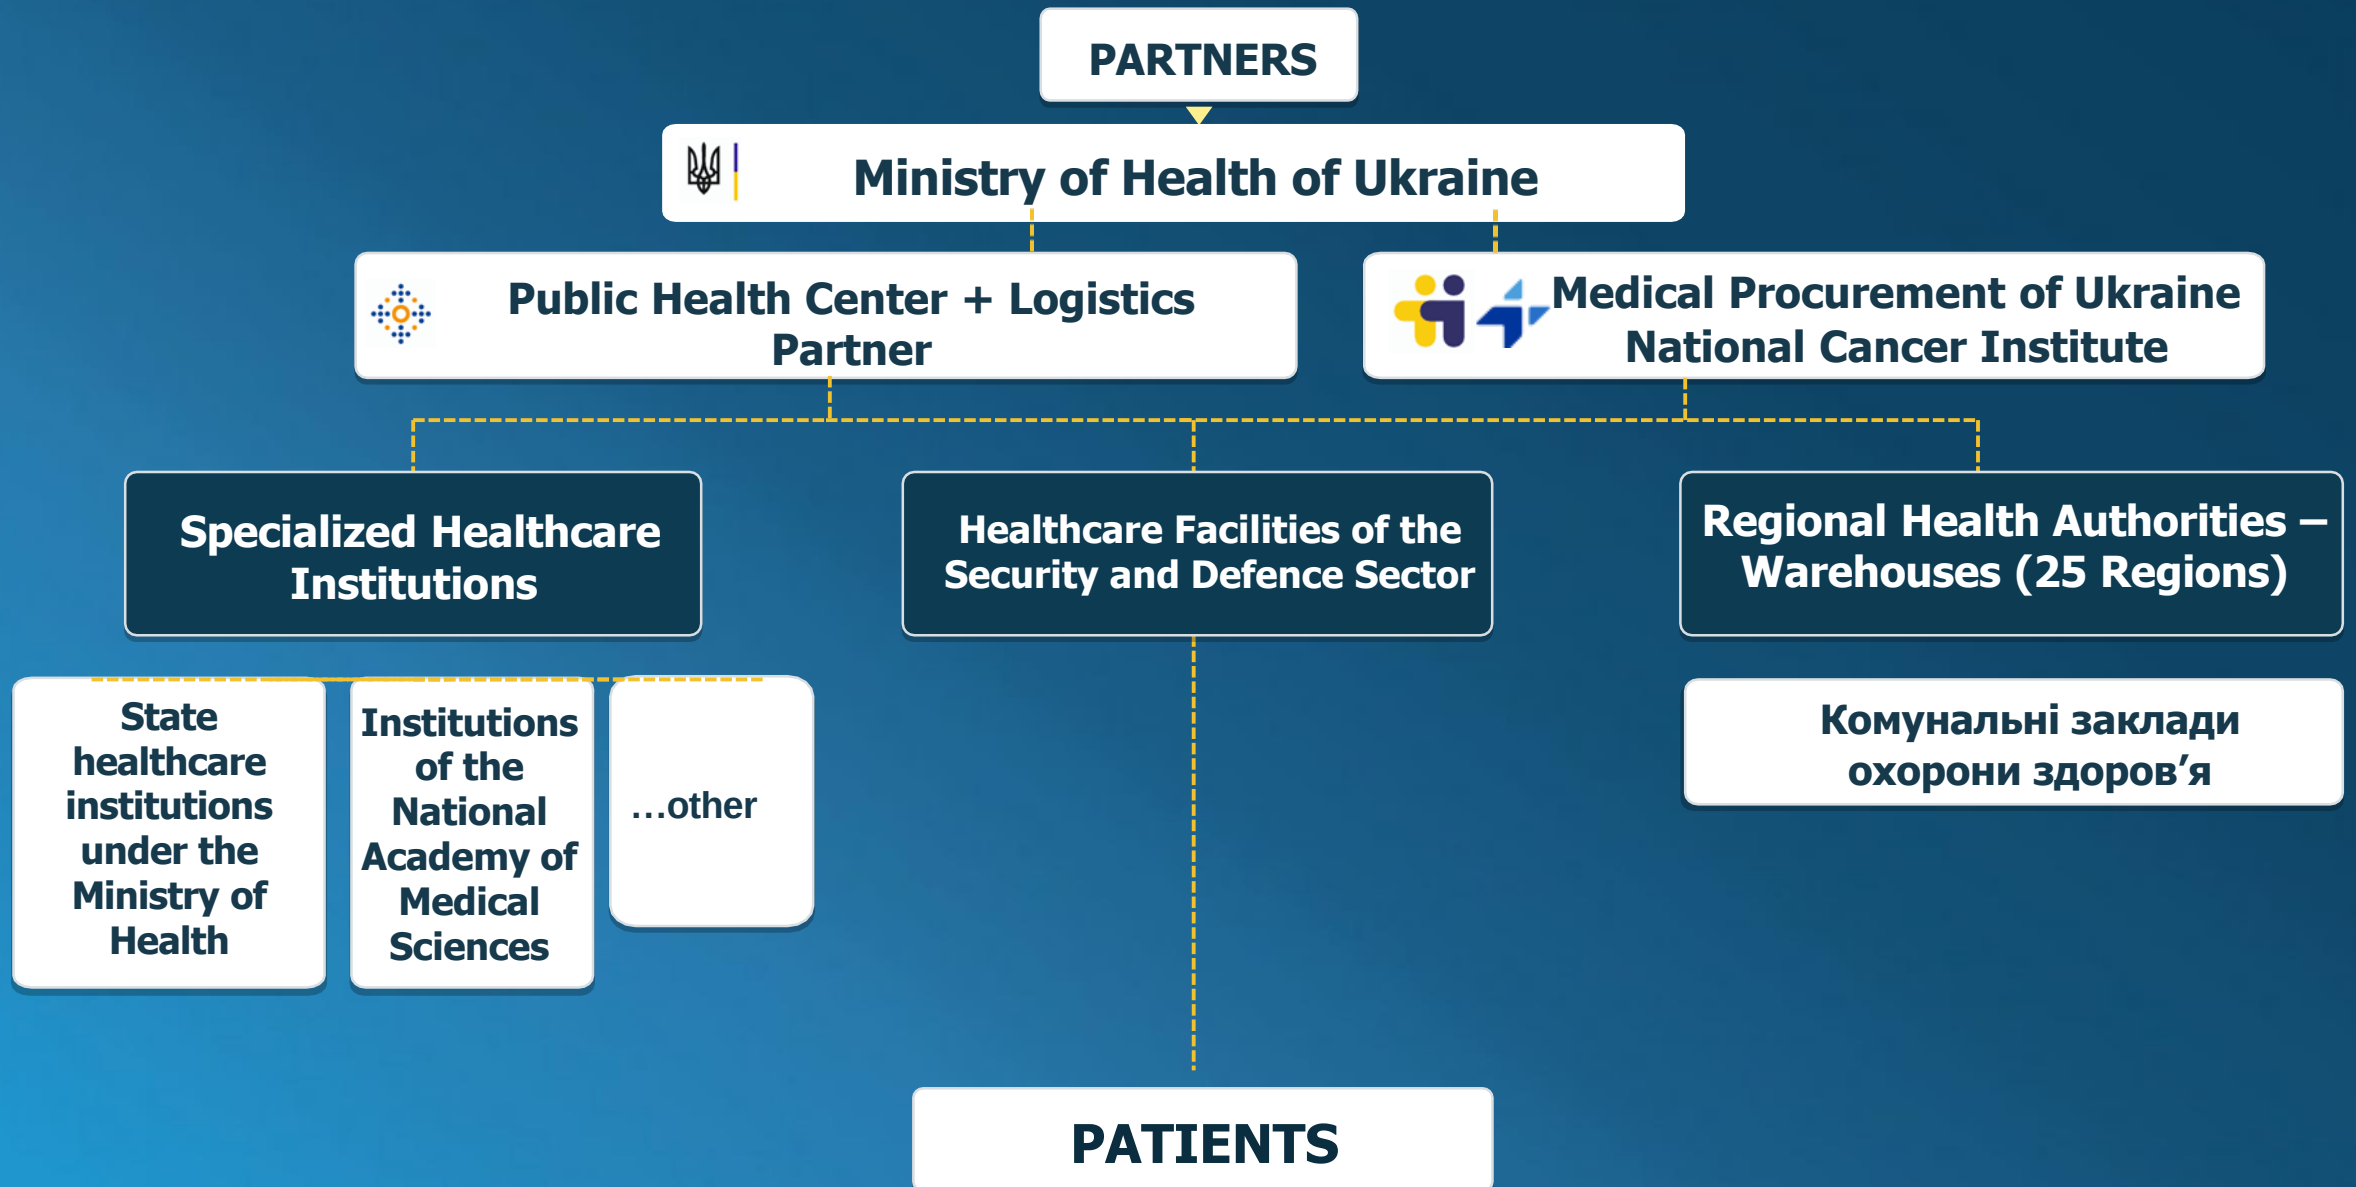

1 Identification of primary unloading warehouses in Ukraine and establishment of reserve stock warehouses.

2 Inventory management of medical supplies through a unified information system.

3 Transportation of incoming medical humanitarian aid to its warehouses and sorting.

4 Distribution of medical supplies according to verified needs.

Dynamics of humanitarian supplies (2022-2026)

Medicines

During **2022–2023**, humanitarian aid mainly consisted of medicines used for the treatment of chronic diseases and conditions, including levothyroxine, mesalazine, metformin and glibenclamide. In **2024–2025**, deliveries became more targeted and were provided primarily in response to specific requests. In **2026**, medicine deliveries remained moderate and included ibuprofen, cefepime/colistimethate sodium, Euthyrox, antiepileptic medicines, antibacterial medicines, and selected specialized pharmaceuticals.

Medical Devices, PPE and Medical Supplies

During **2022–2023**, humanitarian deliveries were primarily comprised of face masks, personal protective equipment (PPE), gloves, syringes and needles. In **2024–2025**, delivery volumes declined significantly. In **2026**, a substantial recovery was observed in the PPE category, driven mainly by a large-scale delivery of medical gloves.

Medical Equipment

In **2023**, the majority of humanitarian deliveries included: mechanical ventilators, patient monitors, infusion and syringe pumps. During **2024–2025**, deliveries became highly targeted. In **2026**, humanitarian aid included: portable X-ray systems, syringe infusion pumps, mechanical ventilators.

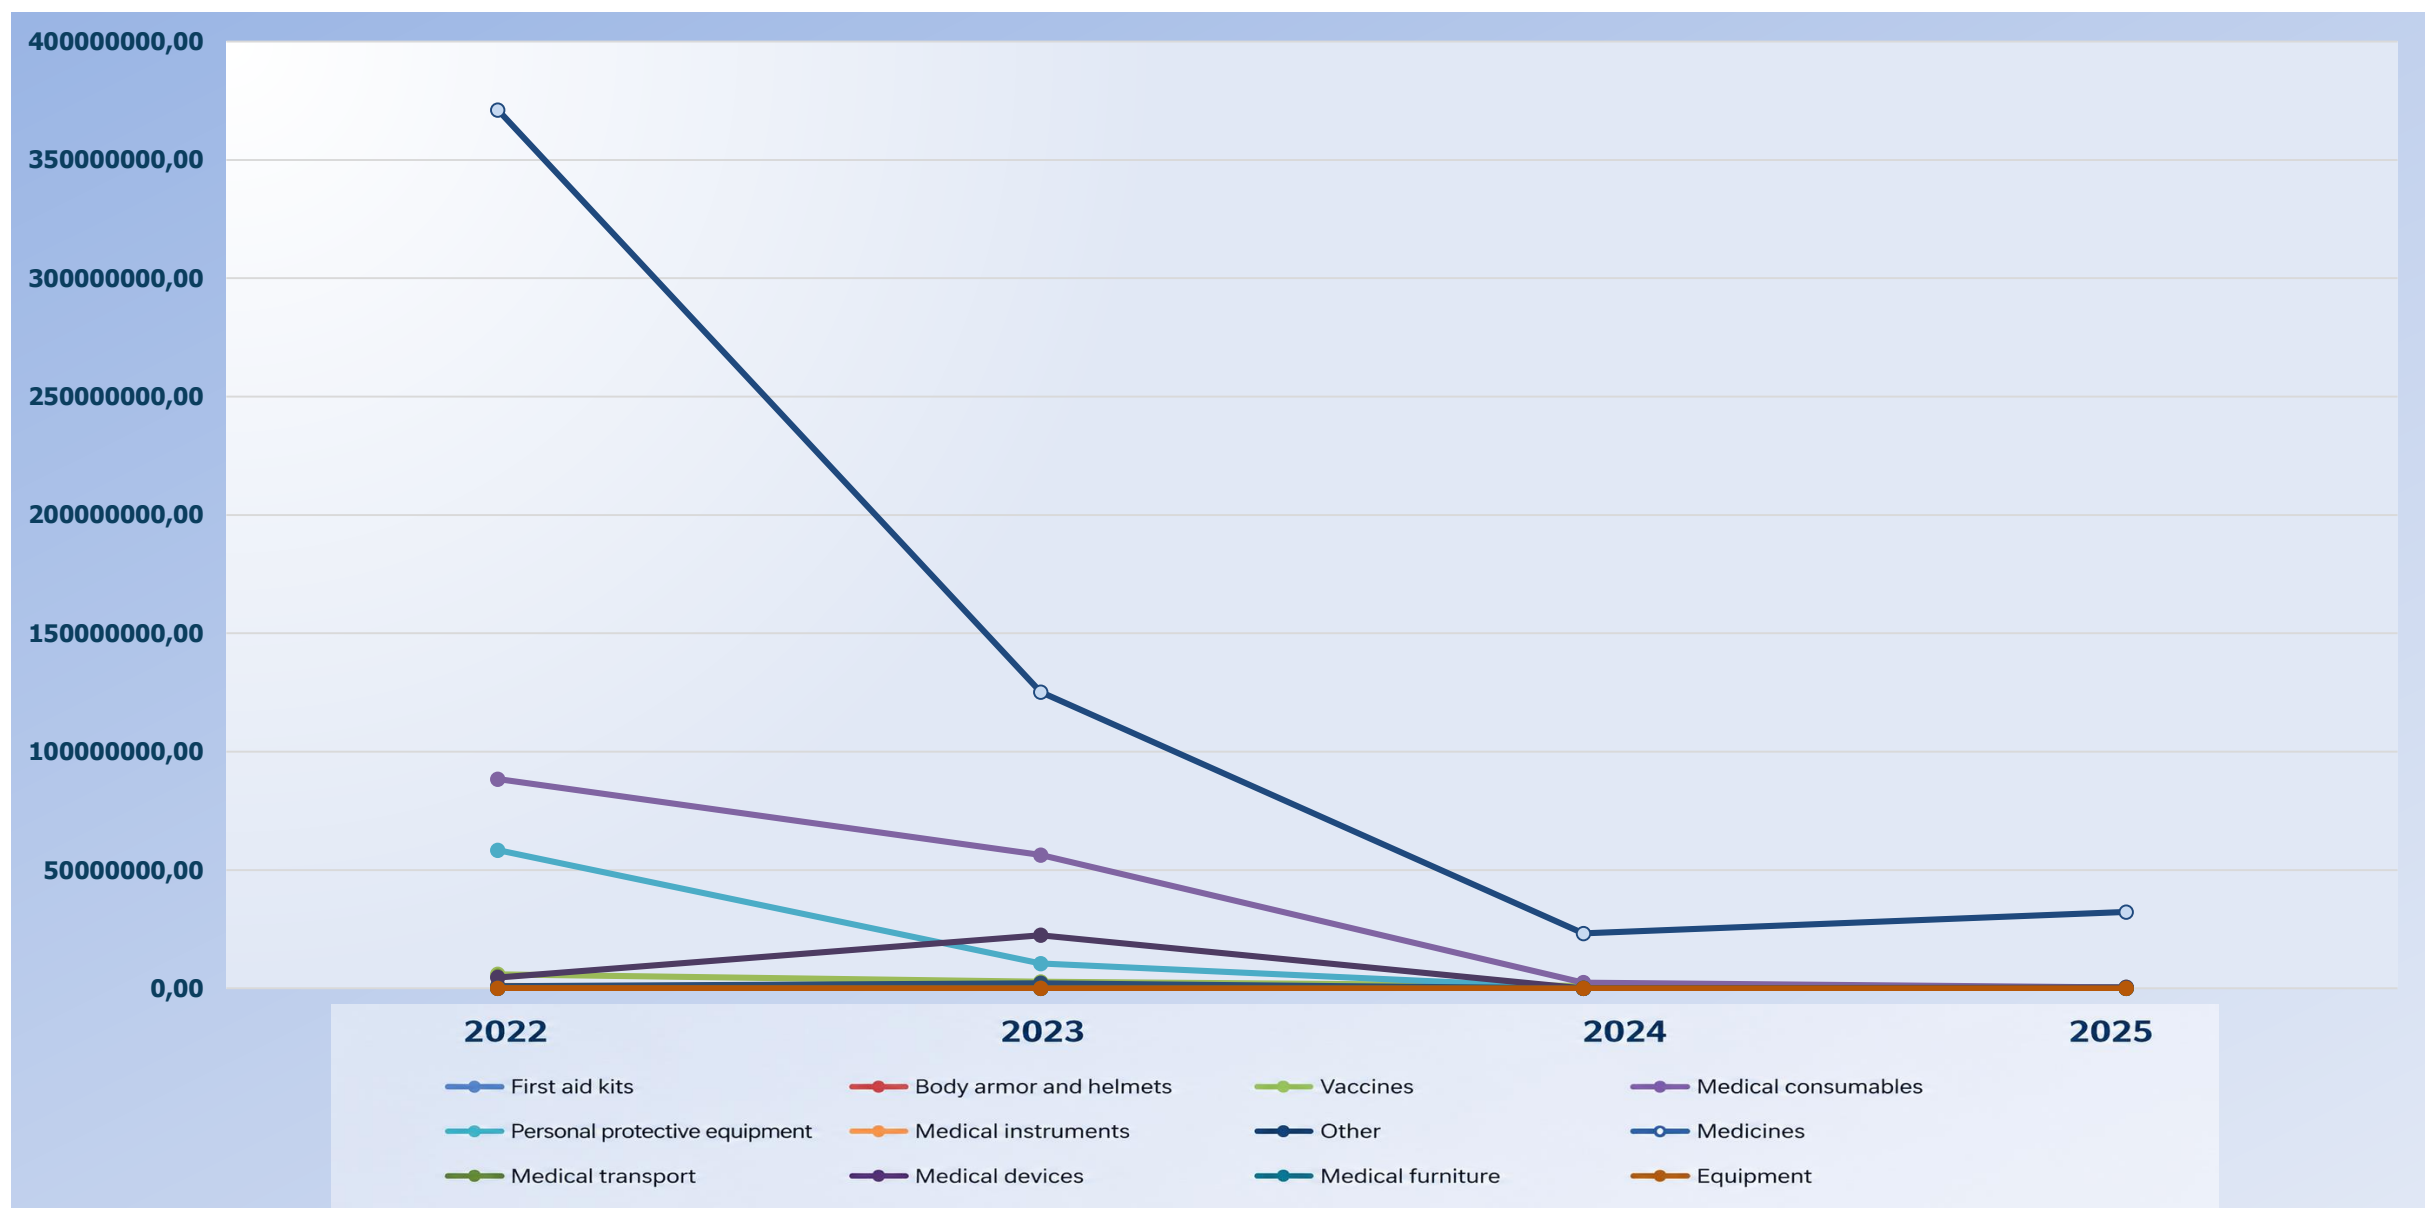

Generators

Only limited quantities were delivered in **2022**, while the largest deliveries occurred in **2023**. The highest level of distribution was recorded in **2024**, followed by a gradual decline.

2025: 146 generators delivered.

2026: 82 generators delivered.

Medical Humanitarian Aid Deliveries

Humanitarian Aid Deliveries (2022–2026)

- **2022:** Humanitarian deliveries reached their highest levels across nearly all categories. The largest shipments consisted of medicines, medical consumables and personal protective equipment (PPE). First aid kits, medical instruments and medical devices were also supplied in substantial quantities.
- **2023:** Overall delivery volumes declined but remained significant for key categories. Large quantities of medicines, medical consumables and vaccines continued to arrive. At the same time, deliveries of first aid kits, medical instruments and PPE decreased sharply.
- **2024:** Most categories experienced a significant decline. Limited deliveries of medical devices and body armour continued.
- **2025:** Delivery volumes reached their lowest levels across almost all categories.
- **Overall Trend:** The dynamics of humanitarian aid demonstrate a transition from **large-scale emergency response in 2022** to **more targeted and needs-based deliveries during 2025–2026**.
- Throughout the reporting period, **medicines remained the most consistently supplied category**, while most other humanitarian aid categories experienced substantial reductions.

Current Needs for Medical Humanitarian Assistance

To ensure the uninterrupted operation of Ukraine's healthcare system under extraordinary pressure, an updated list of priority humanitarian needs has been developed, including:

Medicines

According to the regularly updated priority list, which is revised based on incoming deliveries and the evolving operational situation.

Medical Devices

Wound dressings, syringes, infusion sets, needles, surgical drapes, other essential medical consumables.

Medical Equipment

Ultrasound systems, endoscopic equipment, laparoscopic equipment, X-ray systems, C-arm imaging systems, patient monitors, mechanical ventilators, biochemistry analysers, haematology analysers, other critical medical equipment.

Medical Transport

Ambulances, armoured all-wheel-drive medical evacuation vehicles.

Detailed List of Priority Needs

The complete list of priority humanitarian needs is available via the QR code:

For additional information and further coordination of medical humanitarian assistance, please contact:

support.moz@moz.gov.ua

Humanitarian assistance is required not only to address the healthcare system's critical operational needs but also to replenish strategic reserves of medicines and medical supplies. Strategic stockpiles have been established in six frontline regions, based on region-specific needs assessments and the principle of maintaining minimum reserve levels of essential medical supplies.

The primary objective of these reserves is to: ensure continuity of healthcare services during wartime, enable rapid response to deteriorating security conditions, mitigate disruptions to logistics routes, support mass casualty response, prevent shortages of critical medicines and medical supplies.
